

CV629
CARTRIDGE VALVE

***OPERATING
MANUAL***

GENERAL DESCRIPTION

The CV629 is a pneumatically operated valve designed for precision dispensing of all types of fluids, such as solvents, oils, silicones, glues, UV adhesives, inks, etc. CV629 is designed for use with a valve controller and reservoir tank.

Shot sizes may be fine tuned by turning the adjustment screw at the top of the valve; hence the CV629 valve is recommended for applications where micro deposits are required. Shot size and flow rate are controlled by the tip size, fluid pressure and the duration that the valve is open

SPECIFICATIONS

Weight	:	4.8oz (135 gm)
Air pressure	:	70 to 85 psi (5 to 6 bar)
Maximum fluid pressure	:	300 psi (21 bar)
Air inlet	:	M5 thread w/ push-in fitting for 6mm OD tube
Material inlet	:	1/8 BSPP w/ push-in fitting for 6mm OD tube
Material outlet	:	Luer lock adapter

OPERATING INSTRUCTIONS

Apply a minimum of 70 psi (5 bar) air pressure to the air inlet to open the valve. Use a 5 micron air filter to supply clean and dry air to the valve. The valve is designed to be opened by air pressure and closed by a return spring when air pressure is released.

Fluid is supplied to the material inlet through a 1/8 BSPP port and is dispensed from the material outlet (through a luer lock adapter).

Shot size may be fine tuned by turning the adjustment screw at the top of the valve.

CLEANING

It is recommended to clean the valve after using it, especially when the valve is used to dispense natural hardening type of materials. Clean the valve by continuously dispensing a liquefied detergent before such material hardens.

When disassembling the valve for cleaning, unscrew the end cup and the luer lock adapter and then extract all the components and clean them with an appropriate product.
